

## IntraFind Jira Connector utility app

Document revision 6 - 08/01/2024

---

The **IntraFind Jira Connector utility app** expands the Jira REST API to retrieve some information on issues and projects that are not provided by the standard Jira REST API. The app is necessary only for Jira Data Center and Server installations in combination with the IntraFind iFinder and the IntraFind Jira connector. The app is free and does not require further setup or configuration.

### About iFinder

The **IntraFind iFinder** connects manifold data sources and creates a single searchable, rights-protected index for a unique enterprise search that can be used as a standalone web app or integrated into a web site.

### About Jira connector

The **IntraFind Jira connector** is an app that connects an Atlassian Jira instance to IntraFind's iFinder enterprise search. The app can be obtained from IntraFind and requires an appropriate license.

When performing a search, the app allows users to search Jira projects and issues, as well as filter for keywords, labels, assignees, statuses etc. in the iFinder UI.

### About Jira connector utility app

The **Jira connector utility app** is necessary to retrieve some information on Jira projects and Jira issues that cannot be retrieved with the standard Jira REST API implementation. The app is only necessary if you are using **Jira Data Center** or **Jira Server**.

The app is available from the Atlassian Marketplace. The free app works out of the box after installation and does not require any further configuration or licensing.
